

## Filter Media Change – Sand or Glass

### Description

Sand filter media change service, for sand filters, by replacing the top level of filtration media only, does not disturb the internal working lateral system.

### Services Include

- Remove multi-port or top access dome.
- Remove existing filtration sand from filter.
- Install new sand or glass media to proper level.
- Lubricate top closure o-ring.
- Re-assemble top mount multi-port, (if so equipped), or top closure dome, (for side mount multi-ports).
- Removed filtration media left on-site for local disposal.

### Add-On Options

- Remove existing gravel and replace with new.
- Inspect, remove or replace laterals.
- Remove and replace existing internal air bleed assemblies.
- Provide and install new top closure dome, external air bleed tee or gauge.
- Remove old sand, gravel or glass media from site for remote disposal.
- Provide and install new gaskets, o-rings, seals or internal components.

### Notes

- Services assume that existing sand remains in granular hand moveable form. Solidified, calcified or sand media that is not removable by conventional vacuum and hand methods will necessitate additional charges quoted upon discovery.
- Top mount multi-ports without readily available plumbing may necessitate additional charges.
- Owner will be notified problems beyond normal wear items and quoted upon request.

### Availability

- Available in all North and Central American markets.
